

SOFTWARE FOR FOOD DISTRIBUTORS

Quantum Physics, the Mandela Effect and  
perceived changes to your entrée data

# A technical support time consuming issue

- 1 Over the last 3-4 years, NECS clients have reported that the data that shows up on reports, etc. does not appear to be accurate.
- 2 NECS technical support spends a large amount of time and resources helping clients determine if there is a problem or if it is a software bug.
- 3 When the data is manually audited, including going back to hardcopy invoices, etc., the data on reports, etc. is proven to be accurate and correct.
- 4 This issue causes hours and days of wasted time for both NECS technical support, and our clients.
- 5 What is happening?

# The problem can be shown with how item descriptions are changing.

- ➊ While client data is very specific to a specific client, the same exact issue is happening related to item descriptions, which are well known, and common amongst all clients.
- ➋ For example, you might look at a report or dashboard and know from your memory, if one of your customers purchases much more or less of a certain item, it would raise some red flags in your mind.
- ➌ Many of our clients will actually look at hard copy print outs of all their invoices for the day, to manually see what customers are purchasing, etc., so this information becomes well known.
- ➍ This is NOT to make an excuse for a software bug or corrupted data in your **entrée** data tables.

Let's begin with  
the Avocado.

The most  
popular type of  
Avocado is the:

HA\_S

The answer is:

# HASS

Did you think it  
was HAAS?

1 The story of how these Avocados were discovered has also changed. In the past from my research, they were crossbred by a German botanist named Rudolph HAAS. I specifically remember reading about his story.

2 However now, they were accidentally discovered growing in the backyard of a post office worker named Rudolph HASS.

3 Lets look at another example...

Let's move on to the  
Apple.

A very popular type and  
the national apple of  
Canada is:

Macintosh

or

McIntosh

The answer is:  
**McIntosh**

Did you think it  
was  
**Macintosh?**

1 This information change is also noteworthy because Apple Computer had released the Apple Macintosh computer in 1984, which we now know to be incorrectly named. They should have named it the Apple McIntosh Computer.

2 Lets look at another example...

Let's move on to the  
tiny cabbages known as:

**BRUSSELS SPROUTS**

or

**BRUSSEL SPROUTS?**

The answer is:  
**BRUSSELS  
SPROUTS**

- 1 This just doesn't sound correct.
- 2 Lets look at one last example, though many exist...

Have you ever heard of  
a type of stuffing mix  
named:

**Stouffer's  
Stove Top  
Stuffing?**

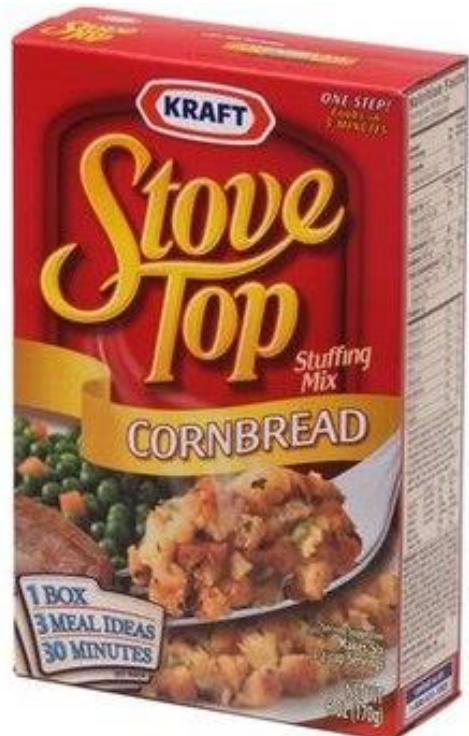

# Impossible!

Stouffer's  
Stove Top  
Stuffing has  
NEVER, EVER  
existed!

1 This stuffing mix was introduced by General Foods in 1972. It was then purchased by Kraft in 1995. It has never been called Stouffer's Stove Top Stuffing. Kraft reports at least 60 million boxes sold / year.

2 The tagline is: "If it's not Stove Top, it's not Thanksgiving."

# What is happening and why?

## Quantum Physics

- 1 Changes in data is a phenomena that software technology companies like NECS, Inc. have been noting, most especially as it affects our bottom line and requires more technical support resources.
- 2 Quantum Physics states that there are an infinite amount of parallel universes and that the nature of our universe and all others in the multi-verse is that they are HOLOGRAPHIC. As the reference “The Holographic Universe” by Michael Talbot.
- 3 Others in the mainstream world have been noting these types of changes and have coined the phrase, “The Mandela Effect” to describe what is happening.

# What is the Mandela Effect?

- ❶ Named after Nelson Mandela in 2009, as over thousands of people on Reddit acknowledged a distinct memory of him dying in prison in the late 1980's, riots in the streets of South Africa, etc. However, he did not actually die until 12/5/2013.
- ❷ Other popular Mandela Effects include the JFK Assassination and Berenstein Bears children's books. Over 10,000 have been logged and confirmed. It also includes changes in human anatomy, animals and the location of continents on our planet.
- ❸ In the world of Quantum Physics, everything is data. Even our DNA is software and data which contains the blueprint of who we are.

# What is a Quantum Computer?

1 A company called D-Wave, out of Vancouver, has created and sells the world's most advanced quantum computer. It can solve problems faster than all the computer technology combined currently existing on our planet.

<https://www.dwavesys.com/>

2 The President of D-Wave, has stated publicly and in large technology gatherings, that the way they work is by "**exploiting the resources of parallel universes.**" The number of parallel universes it can exploit is measured in Q-BITS.

3 This is important to note because it lays the groundwork to begin to understand what is happening. Basically, parts of other parallel universes have been merging / replacing into ours.

# What is the outcome of all of this?

- 1 So just as Stouffer's Stove Top Stuffing never existed in our reality, or something else like HAAS Avocados changing to HASS in our universe or timeline or whatever you want to call it... such is the same with your data.
- 2 NECS, Inc. will continue to help you verify all your report and dashboard information, but it's important that you at least be aware of this as a very real possibility.
- 3 Trust yourself! Trust your memory! These things are NOT group misremembering's, or "confabulations" or signs of Alzheimer's disease. Research for yourself. We are living in a very special time. These things are like an alarm clock going off to either awaken you or hit the snooze button.
